

Screen Sharing

With Vast TeleCloud, you can share your screen. Those viewing your screen only need to have a computer to view what you are sharing.

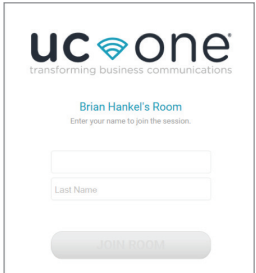

What can you do with a screen share?

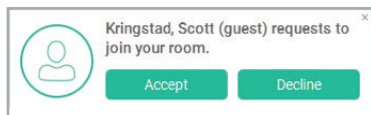

- » Provide employee training via a conference call
- » Show products or give demonstrations to potential customers who live in other areas.
- » Discuss customer service issues, and show the bill on your customer's screen.
- » Technical support - show a client how to perform a task.
- » Share information with employees within your company, customers, or potential customers.

Set up screen sharing

- » While using your Unified Communications app, simply click on the "My Room" icon. 
- » Other Unified Communicator app users may join your room by right-clicking on your name and selecting "Join Room".
- » If you'd like to invite people who do not have the Unified Communications app but do have a computer to join your Room, you may send an invitation via email. Simply click on "Email My Room Invitation" if you have it integrated with your email. If you do not have it integrated, click on "Copy my Room Invitation" and paste it into the email you are sending.

- » The recipient will receive a link they will need to click on.

- » After the recipient enters their first and last name and submits, you will receive a message asking you to accept or decline their request to join. 

- » Next, select the start sharing icon in the upper right hand corner. 

- » Select which screen or application you wish to share.
